PROJECTS

Decentralized Voting System (Ethereum Blockchain) - Developed a Solidity smart contract and successfully deployed smart contracts on the Sepolia testnet - Created a React frontend featuring secure routing for Admin, Candidate, and Voter personas - Integrated Ethers.js and Hardhat to interact with the Ethereum blockchain
Automatic Number Plate Recognition System - Engineered a vehicle surveillance system using Flask for the backend and Jinja for frontend monitoring. - Integrated YOLOv11 (s/m) and OpenCV to automate vehicle detection and license plate extraction via PaddleOCR achieving 95% accuracy - Utilized MySQL with SQLAlchemy (ORM) to store license plate data and transaction logs.
Civil Vehicle Acquisition System - Architected a microservices-based web application for tracking civilian vehicle acquisition at defense checkpoints using MERN Stack - Implemented asynchronous job processing using BullMQ queues to maintain API responsiveness during high traffic. - Secured APIs with JWT authentication at gateway with optimized hashing logic to increase availability by 25% - Integrated Winston for logging for easy auditing and implemented redis caching to have <10ms response time for queries
